

How To **Disinfect Your Workplace**

Cleaning ✓
Disinfecting ✓
Sanitizing ✓

Disinfecting has become an especially important part of commercial cleaning since the pandemic. Disinfecting has been proven to be effective in reducing the risk associated with the spread of viruses in a workplace environment.

Cleaning

Removes germs, dirt and impurities from surfaces or objects with soap (or detergent) and water. Cleaning does not necessarily kill germs but lowers their numbers and the risk of spreading infection.

Disinfecting

Uses EPA (Environmental Protection Agency) registered chemicals to kill germs on surfaces. It does not necessarily clean dirty surfaces or remove germs, but by killing germs on a surface after cleaning, it can lower the risk of spreading infection.

Sanitizing

Lowers the number of germs on surfaces or objects to a safe level. This process either cleans or disinfects surfaces and objects to lower the risk of spreading infection.

Over more than 50 years, Jani-King has earned our trusted reputation by providing results. No matter what your need may be, we can deliver a commercial cleaning program that provides consistent, quality cleaning and disinfecting that makes your workplace safe and healthy.
