

3 Problem >>> Areas in Schools

Jani-King specializes in cleaning schools, daycare centers and universities. School cleaning is a big part of what we do, and we believe the great work we do at schools and daycares help keep viruses at bay, especially during the flu season.

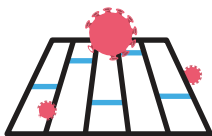

We know that students can get sick anywhere, but if we have anything to say about it, they won't pick up viruses and germs at school. We can deliver a program for your campus.

1

Even a bathroom that looks clean may not be as clean as you think.

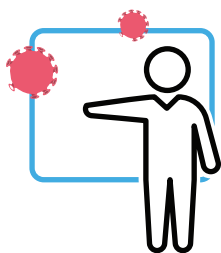

Is a deep clean or disinfecting service being done? Is your custodial staff cleaning the doorknob on the inside of the bathroom? What about the soap dispenser? Handles are touched by every student that washes their hands.

2

It's especially important to make sure your floors are clean in winter.

Kids' sneakers bring in dirt and road salt with toxic chemicals. Slush, snow and mud are tracked in as well, which means that essentially anything kids are stepping on is coming into your school. We're here to clean and disinfect the areas that need attention.

3

The classroom can be the worst for high-traffic touchpoint germs.

The classroom has light switches, doorknobs, floors, desks and chairs, that are often touched all day so they need to be cleaned and disinfected. The carpets should be thoroughly vacuumed since it is usually full of dust, dust mites, pollen and bacteria.

Other areas need to be cleaned including common areas, lobbies, hallways and cafeterias to fight against dirt and germs. Also, the type of equipment that is used is very important when cleaning. Jani-King can also customize a green cleaning program for your campus. Our green cleaning services use environmentally friendly products while working to reduce contaminants that pollute our Earth.
